

Mobile Money & Fintech Dashboard

Power BI build guide — data sources, prep, build steps, and publishing. Prepared for Choolwe Cheelo.

Contents

1. The data (where to download)
2. Prep the Findex file
3. Build the Power BI report (step by step)
4. Publish & wire it into the portfolio
5. What's already done vs. what's left

1. The data — all free, no login

Use **Global Findex** as your backbone, **GSMA** for the growth/transaction story, and **Bank of Zambia** for the local deep-dive.

A. World Bank Global Index 2025 — primary dataset ★

The cleanest, most dashboard-ready source: one spreadsheet, ~300 indicators, 141 economies, survey waves 2011→2024.

- **Download:** worldbank.org/en/publication/globalindex/download-data → grab `GlobalFindexDatabase2025.xlsx` (also `.csv` / `.dta`).
- **Contains:** account ownership, mobile money account ownership, broken down by gender / income quintile / rural / age / education — covers your "inclusion gaps" and "benchmarking" questions. Includes a *Sub-Saharan Africa* aggregate row and a *Zambia* row, so benchmarking is just a filter, not a join.
- This single file answers 3 of your 4 key questions on its own.

B. GSMA Mobile Money Metrics — time-series / transaction value

- **Page:** gsma.com/mobile-money-metrics (interactive dashboard; JS-rendered, open in a browser). Export the country/region series to CSV from the dashboard.
- **Contains:** registered vs active accounts, transaction value & volume, agents — annual, by country and region. This is your "adoption over time" and "transaction value" series.
- **Headline context:** global mobile-money transactions hit **\$2T in 2025**, ~2B registered accounts, 500M+ monthly active users (GSMA SOTIR 2025).

C. Bank of Zambia — Zambia-specific numbers

- **Stats portal:** boz.zm/payment-systems-statistics.htm (JS-rendered, open in a browser).
- **Annual reports (direct PDFs, easiest):** [2023 NPS Annual Report](#), [2022 NPS Annual Report](#).
- **Anchor figures:** 14.65M registered wallets, 12.33M active wallets (2024); ~4.07B transactions, +9.4% YoY.

Scope tip: If pulling all three feels heavy, ship **v1 on Global Index alone** (clean, comparable, instant) and add the GSMA time-series and a BoZ Zambia tab as v2. Your project page already frames all four questions, so a Findex-only v1 still delivers a complete-looking dashboard.

2. Prep the Findex file (about 15 min)

The Findex Excel is wide (one column per indicator). Two options:

- **Easiest:** open the **Data** sheet, keep only the columns you need (**Country name** , **Country code** , **Region** , **Income group** , **Year** , plus the mobile-money / account-ownership indicators and their gender/rural/income breakdowns), save as **findex_clean.xlsx** .
- **Better for charts:** unpivot the indicator columns into long format (**Country** | **Year** | **Indicator** | **Value**) — do this *inside Power BI* with Power Query (next section), so you never hand-edit the data.

3. Build the Power BI report (step by step)

Step 1 — Get data

Home → **Get data** → **Excel workbook** → select **GlobalFindexDatabase2025.xlsx** → in the Navigator pick the **Data** sheet → **Transform Data** (opens Power Query).

Step 2 — Clean in Power Query

- **Use First Row as Headers** if needed.
- Keep relevant columns (right-click unneeded columns → Remove).
- Select the indicator value columns → **Transform** → **Unpivot Columns** → rename the new columns to **Indicator** and **Value** .
- Set types: **Value** = Decimal, **Year** = Whole number.
- Repeat **Get data** for the GSMA CSV (a second query) — same long shape: **Country** | **Year** | **Metric** | **Value** .
- **Close & Apply**.

Step 3 — Model

- Build a small **DimCountry** table (Country, Region, Income group) and relate it to both the Findex and GSMA queries on **Country code** . This lets one slicer filter both sources.
- Add a **DimYear** table if you want a clean time axis.

Step 4 — Core measures (DAX)

```
Mobile Money Ownership % =  
    CALCULATE( AVERAGE('Findex'[Value]),  
        'Findex'[Indicator] = "Mobile money account (% age 15+)" )  
  
Account Ownership % =  
    CALCULATE( AVERAGE('Findex'[Value]),  
        'Findex'[Indicator] = "Account ownership (% age 15+)" )  
  
Gender Gap (pts) =  
    [Account Ownership % Male] - [Account Ownership % Female]
```

Swap the indicator strings to match the exact labels in your file.

Step 5 — Build pages, one per Key Question on the project page

Page	Visual	Answers
1. Overview	KPI cards (Mobile money %, Account %, Gender gap) + a map	Headline snapshot
2. Adoption over time	Line chart — Value by Year, legend = Country (Zambia vs SSA), from GSMA active/registered accounts	Adoption over time
3. Transaction value	Column/area — transaction value by year; card for value ÷ GDP	Transaction value vs GDP
4. Inclusion gaps	Clustered bar — ownership by gender / rural / income quintile	Inclusion gaps
5. Benchmarking	Bar — Zambia vs SSA vs world; slicer to pick any country	Benchmarking

Add a **Region** and **Year** slicer on every page. Match your portfolio accent (`#c2410c`) in **View** → **Themes** → **Customize** so the dashboard is on-brand with the rest of the site.

Step 6 — Polish

- Consistent titles, data labels on key visuals, a "Source: World Bank Global Findex 2025 / GSMA" footnote text box.
- Test that the slicers cross-filter all pages.

4. Publish & wire it into your portfolio

- **File** → **Publish** → **To Power BI (web)** → pick a workspace.
- In the service, open the report → **File** → **Embed report** → **Website or portal** → copy the `https://app.fabric.microsoft.com/view?r=...` URL.
- In `project-fintech.html` : delete the "publishing soon" placeholder `<div>`, **uncomment** the prepared `<iframe>` block, and paste that URL into the **two** marked spots (the iframe `src` and the "Open in Power BI Service" link).
- Optionally add the **Full Report (PDF)** and **GitHub Code** buttons from the commented stub in the hero (export the report to PDF; push the `.pbix` + cleaned data to a `mobile-money-fintech` repo).

- Commit & push — Vercel auto-deploys.

5. What's already done vs. what's left

Task	Status / who
Project detail page (<code>project-fintech.html</code>) with embed placeholder	Done (Claude)
Card on <code>projects.html</code> + themed SVG image	Done (Claude)
This build guide	Done (Claude)
Download the raw datasets	Either — Claude can fetch the Findex file; GSMA/BoZ need a browser
Build the report in Power BI Desktop	You (GUI app Claude can't drive)
Publish to your Power BI account & get embed URL	You (needs your Microsoft login)
Paste embed URL into the page, commit, push	Either
<i>Alternative:</i> a fully-coded interactive HTML dashboard (no Power BI)	Claude can build end-to-end
